

Project Name

Tasty Share — Recipe Sharing Platform

1. Project Description

Tasty Share is a recipe-sharing web application that allows home cooks and food lovers to discover, create, and share recipes with a community. Users can browse recipes by category, save favorites, and upload their own recipes with photos. Admins moderate content and manage the platform.

Problem it solves: Many people struggle to find reliable, well-organized recipes and have no easy way to save or share their own cooking ideas with others.

Target users: Home cooks, food bloggers, and anyone who wants to discover or share recipes.

Main purpose: To create a simple, attractive platform where users can publish recipes with photos, browse recipes by category, and save their favorites — while admins keep the content organized and appropriate.

2. Users and Roles

Role	Permissions	Available Actions
Admin	Full control over users and content	Manage users, manage all recipes, manage categories, delete inappropriate content
Chef (Registered User)	Manage own content	Create/edit/delete own recipes, upload recipe photos, upload profile picture, mark favorites, comment on recipes
Guest (Not Logged In)	View-only	Browse recipes, view recipe details, search/filter — cannot post, favorite, or comment

3. Main Features

Authentication Features

- Register (name, email, password)
- Login (email + password, returns JWT token)
- Logout
- Password hashing (bcrypt)

Authorization Features

- Role-based access control (Admin vs Chef vs Guest)
- Protected routes — only logged-in users can create/edit/delete

recipes

- Only the recipe's owner (or an Admin) can edit/delete that recipe
- Admin-only dashboard to manage users and all recipes

CRUD Features

Recipes - Create: Add a new recipe (title, category, ingredients, steps, cook time, difficulty, photo) - Read: View all recipes / view single recipe details / filter by category - Update: Edit recipe details (owner or admin only) - Delete: Remove a recipe (owner or admin only)

Categories - Create: Add a new category (admin only) - Read: View all categories - Update: Edit category name (admin only) - Delete: Remove category (admin only)

Users - Read: View own profile / admin can view all users - Update: Edit own profile info and profile picture - Delete: Admin can remove a user account

Favorites - Create: Add a recipe to favorites - Read: View list of favorite recipes - Delete: Remove a recipe from favorites

4. Image/File Upload Features

Upload	Allowed Types	Max Size	Who Can Upload
Recipe Photo	JPG, PNG	5 MB	Chef (logged-in users)
Profile Picture	JPG, PNG	2 MB	Chef (logged-in users)

5. UI Design — Pages to Design

- **Login Page** — email, password, "Register" link
- **Register Page** — name, email, password, confirm password
- **Home Page** — hero section, featured/favorite recipes, category shortcuts
- **Recipes List Page** — grid of recipe cards with photo, title, category, filter/search bar
- **Recipe Details Page** — large photo, ingredients list, step-by-step instructions, favorite button, edit/delete (if owner)
- **Add/Edit Recipe Page** — form with title, category dropdown, ingredients, steps, photo upload
- **Profile Page** — user info, profile picture, "My Recipes" list, "My Favorites" list
- **Admin Dashboard** — sidebar navigation, table of all users, table of all recipes, manage categories

(Design these in Figma, Canva, or Adobe XD, then add your design link at the bottom of this document.)

6. UI Screens — Component Breakdown

Recipes List Page

- Sidebar: category filter list

- Top bar: search input + “Add Recipe” button
- Grid: recipe cards (photo, title, category badge, favorite icon)

Recipe Details Page

- Large photo banner
- Title, category, cook time, difficulty badges
- Ingredients list (left column)
- Steps list (right column, numbered)
- Favorite button (heart icon)
- Edit / Delete buttons (only visible to owner/admin)

Add/Edit Recipe Form

- Title input
- Category dropdown
- Ingredients (add/remove list items dynamically)
- Steps (add/remove list items dynamically)
- Cook time input
- Difficulty dropdown (Easy/Medium/Hard)
- Photo upload button with preview
- Save / Cancel buttons

Admin Dashboard

- Sidebar: Users, Recipes, Categories tabs
 - Users table: name, email, role, delete action
 - Recipes table: title, author, category, delete action
 - Categories table: name, edit/delete actions
-

7. Project Documentation Summary

Project Name: Tasty Share — Recipe Sharing Platform

Project Description: A recipe-sharing platform where users create accounts, publish recipes with photos, browse by category, and save favorites, while admins moderate content.

User Roles:

Admin:

- Manage users
- Manage all recipes
- Manage categories

Chef (registered user):

- Create/edit/delete own recipes
- Upload recipe & profile photos
- Save favorites

Guest:

- Browse and view recipes only

Features List:

Authentication:

- ✓ Register
- ✓ Login
- ✓ Password hashing

Authorization:

- ✓ Role-based access (Admin / Chef / Guest)
- ✓ Protected routes
- ✓ Owner-only edit/delete

CRUD:

- ✓ Manage recipes
- ✓ Manage categories
- ✓ Manage users (admin)
- ✓ Manage favorites

Upload:

- ✓ Recipe photos
- ✓ Profile pictures

UI Design Link: *(paste your Figma/Canva link here once designed)*

8. Backend Structure Plan (matches what you're already building)

```
NTI_Project/
├── controllers/
│   ├── recipesController.js
│   ├── categoriesController.js
│   ├── usersController.js
│   └── authController.js
├── routes/
│   ├── recipesRoutes.js
│   ├── categoriesRoutes.js
│   ├── usersRoutes.js
│   └── authRoutes.js
├── models/                (added later when we connect MongoDB)
├── middleware/
│   ├── auth.js            (checks JWT token, protects routes)
│   └── upload.js          (handles image uploads)
├── uploads/               (stores uploaded images)
├── data/                   (JSON files for now, MongoDB later)
└── index.js
```

This keeps the exact same beginner-friendly pattern you already know (controllers + routes), just with a few more pieces added: **auth**, **middleware**, and **file uploads**.
